Work Experience

Data Entry Pharm Tech II

CVS Specialty Health

April 2021 to Present (2 years)

- Implemented a user-friendly calculator for processing prescription orders that streamlined medication instruction entry, quantity tracking, note-taking, and supply management, all utilizing Excel and Excel VBA.
- Developed and automated reports measuring key employee metrics such as errors, idle time, and productivity using Excel
- I am responsible for accurately and efficiently entering patient and medication data into our system for the preparation and delivery of IVIG treatments.

Web Developer

The Missing Peace Photography

February 2023 - March 2023 (2 months)

- Developed a responsive, user-friendly photography website using Angular as a freelance single-page application developer, collaborating closely with the client to understand their requirements and ensure that the website's layout and design aligned with their brand and visual identity.
- Utilized Angular to incorporate user-friendly features, including image galleries, social media integration, and interactive forms into the website.
- Conducted extensive testing and debugging to ensure optimal website functionality and provided ongoing support to the client to address any issues that arose after project completion.

Projects

Full Stack E-commerce Application - Card Collectibles Website

- Created a Full Stack Ecommerce website for Collectibles with Angular Frontend with angular routing, reactive forms, search implementation, order placement to add to database.
- Created and Implemented a RESTful API with Java Spring boot and MySQL database that holds my products, accounts and orders.
- Implements Stripe Payment for checkout and Okta OAuth Authentication for user login and management.

Full Stack Card Guessing Game

- Built in Angular Front-end and Java Backend with Spring Boot Data Rest and MySQL database deployed to Amazon AWS.
- Game Consists of a random card being shown in pixelated view for the user to guess the set and character.
- Created and Implemented a RESTful API that would give card information including image URIs, name, set and other attributes. Created API calls for filtered lists based on sets, groups, card name, or ID.

Pharmacy Medication Calculator

- Medication entry tool used in order to assist technicians with entry for IIG medications, includes directions, quantities, vial sizes, supplies and comments.
- Originally I created with Microsoft VBA I recreated the supply calculator with Angular and TypeScript, this is used across my team for entry assistance.
